Implico worldwide

Implico stands by your side. All over the world. We safeguard this claim with subsidiaries in the United States, Europe, and Asia, as well as through several European affiliates and a global network of local partners.

Thinking and acting globally

We take charge in global roll-out projects or integrate different locations into one efficient overall solution, across borders. When you handle international optimization projects, you need to think outside the box. Our customers think and act globally. So do we.

Implico expands

The last couple of years were shaped by Implico's strong expansion into the world markets. Significant successes were, among others, the formation of independent locations in the USA and Malaysia. The newly established companies improve the service for our internationally operating corporate customers, and their range of products and services meets with great interest among new customers. Quality is much valued worldwide.

Multilingual software

The software solutions developed by Implico are used worldwide. A broad selection of available language versions ensures that employees from different national locations can work in their respective mother-tongue. This also increases efficiency. When designing the user interfaces, we of course keep local particularities in mind.

Our pledge: Service without compromise

The international consultancy Implico offers you worldwide service, on location and of first-class quality.

Where ever you need us – we'll be there.

Know each track

Unique SAP® competence

Your SAP® projects are in the best of hands at Implico. We have long standing, well-founded experience – no matter if we are talking about implementation or migration, complete solutions through integration, or (national or international) roll-outs.

We have not just mastered the core system SAP R/3®, but also the respective industry solutions like SAP OGSD® or SAP Waste and Recycling®.

Integration

Profit from a company-wide, integrated SAP® solution. Implico maps your company's complete supply chain in SAP®. Our particular strength lies in our integrated approach. We think process-oriented and cross-modules. Not the module is important, but the ideal design of the processes.

Individual functionality

Chances are that you have specific, individual needs that differ from standard processes of the industry. Implico implements exactly the functionality in SAP® that you need. This can concern tour planning and optimization, the integration of communication tech-

nologies with SAP® – i.e. in your depot or fleet – or the connection of a CRM or a weighing scale. We either develop these features directly within the SAP® system. Or we use a certified standardized interface. The result is always a clean, stable solution.

Preserve the standard

An important aspect when optimizing SAP® systems or implementing new functionality is the preservation of the standard. For this, Implico uses a maximum level of sensibility and competence. We find solutions that maintain your system's ability for release and migration.

Close partnership

Implico has a close relation with SAP. That way we are informed of upcoming developments in good time and are able to offer future reliability.

The cooperation is obvious with SAP OGSD®, for example. This efficient solution for the distribution of mineral oil products comes from the SAP development partner Implico and is being marketed worldwide by SAP.

Stay well grounded

Head start through competence

The analysis and optimization of business processes requires intensive knowledge from many different areas. Implico offers a unique mix of competencies.

Comprehensive know-how

We assemble the ideal team for your project. This includes experienced experts with in-depth knowledge of your industry's processes, business economics, logistics, hard- and software, and SAP® technologies. Through this competence we are able to analyze our customers' current and future needs and implement integrated systems.

Industry competence

Many of our developers and consultants are practitioners from the respective industry. They know the daily requirements. This noticeably shortens project duration and leads to results that offer maximum advantages concerning practical and economic aspects.

SAP® competence

We are at home in the SAP® world. Our up-to-date and well-founded know-how gives you a definite competitive advantage.

Reliability

The system's secure and stable operation has highest priority. We closely observe the latest technological developments, but before an innovation finds its way into our projects, it has first been tested thoroughly for its road capability. When designing systems, we only utilize proven and tested technologies. Only they can guarantee a lasting, future-proof, and reliable operation.

Structured approach

Based on our experience gained in numerous projects we have developed a structured project management. The processes are clearly defined and are being tackled in the optimal order. At the same time, the time schedule and achieved successes are being continuously monitored.

User-friendliness

Systems implemented by Implico stand out because of their high degree of user-friendliness. We talk to the users, listen to them, and design optimal user interfaces and processes accordingly.

Be well prepared

Unique SAP® competence

Implico has a close relation with SAP. That way we are informed of upcoming developments in good time and are able to offer future reliability.

The cooperation is obvious with SAP OGSD®, for example. This efficient solution for the distribution of mineral oil products comes from the SAP development partner Implico and is being marketed worldwide by SAP.

Apply strengths

Industry competence: Know what you talk about

From the economical and technical competence of the business consultancy Implico, every company can profit. For two industries, though, cooperation with Implico is especially profitable: for the oil, gas, and chemicals sector and the waste management industry.

In both of these industries, Implico has long standing, intense expertise at its disposal, and is counted among the leading management consultancies.

Oil, gas, and chemicals

This is Implico's core market. Implico grew through software development and optimization projects for oil and gas customers. The dispatch and shipping system **OpenTAS**® (Terminal Administration System) has become the de facto standard. OpenTAS® is the leading solution for the efficient strategical and operational management within mineral oil logistics. Another successful product is **SAP OGSD**® (Oil & Gas Secondary Distribution). It was also developed by Implico and is now being distributed by SAP. This standard solution optimizes the service-heavy distribution of mineral oil products. Implico supports companies in demanding projects by offering SAP®-

related services, process optimization, system integration, and supply chain management.

Waste management industry

We have many years of experience in the municipal as well as privately-owned waste management sector. This is why we can implement your business processes, based on SAP® and SAP Waste and Recycling®, in such a way that they completely meet your needs while not leaving the SAP® standard. We optimize and automate your whole process chain – including customer contact, disposition, tour planning, execution, invoicing, and even meaningful controlling. Our aim is to create solutions for you whose performance impresses the industry and which offer you the largest possible added value.

Industry know-how is the key

Our industry know-how provides you with many advantages. Compared to industry-inexperienced consultants, we offer more functionality and better processes in a shorter time and with less cost.

It is always better to know what you are talking about.

Win home games

One-stop business

Profit from our seamless chain of competence. Profit from a service provider who comprehensively thinks and acts. Profit from one central contact person and consistent responsibilities. Profit from one-stop business. Profit from Implico.

Consulting services

We provide you with individual, competent, objective consultation. What economic, technical, or organizational goals are realistic? How much time is needed? What are the financial dimensions? Here, honest answers are priceless. The first step will always include a precise analysis of your processes. We take a look at operations and assess them according to individual characteristics of your company as well as standards from the industry. We can thereby identify optimization potentials. The result: Implico tells you in detail and from a practical point of view which processes should be modified and how, so that your company can be further improved.

Software factory

Besides its consulting know-how, Implico's strength also lies in its long standing experience in developing

proprietary software. Our main focus hereby is on the oil, gas, and chemicals industry, where our solutions **OpenTAS®** and **SAP OGSD®** have become leading standards. Our development success is based on the same factors that distinguish our project accomplishments: well-founded know-how, a pragmatic, solution-oriented approach, and the continuous pursuit of excellence.

Individual and project development

Not always do the available solutions fit optimally. We realize exactly the functionality that you need. This can include the implementation of new and innovative processes within an SAP® system, the realization of individual options within OpenTAS®, or the development of entirely independent applications. You have extraordinary needs? Ask us!

Our services for you

Call on excellence

Our mission

We have made it our business to efficiently optimize our customers' business processes.

To achieve this, we combine industry-specific know-how with powerful in-house developments and dependable partner solutions.

We have years of experience in the oil, gas, and chemicals industry as well as in the waste management sector.

In our cooperation with customers and employees, we count on mutual trust, lasting relationships, and future-proof projects.

Implico – the right contact

Implico is the right contact person for the optimization of processes. The versatile business activities cover all of your needs.

We analyze your processes. We uncover hidden potentials. We define the ideal products and services to match your goals. And at the end we take care of the implementation – in time, in quality, and in budget.

If requested, our full service even includes the introduction of document management services and archiving solutions as well as the execution of outsourcing projects within our own data center.

No matter if you are looking for a dependable, responsible general contractor or a highly specialized project partner for challenging tasks: Implico is your full service provider for the optimization of your processes.
